

**New!**

  
Made in Norway

**EXTRA SAFE WITH MORE CONTROL!**

The TOPRO Troja – now available with a reverse braking system, and laser light (optional), designed and developed for people with Parkinson's and other neurological conditions

# TOPRO TROJA NEURO

TOPRO Troja Neuro Standard M

TOPRO Troja Neuro Laser M

## Extra safe

- The reverse braking system ensures the brakes are automatically activated.
- The rollator will only move when the brake handles are pushed in.
- If the brake handles are released the TOPRO Troja Neuro will stop immediately.
- The reverse brake system will prevent falling.
- Safe to sit down and stand up with the brakes automatically turned on.
- Possible to deactivate the brakes completely by pushing the brake handles all the way down to the locked position. The rollator can then move freely.
- Small turning circle makes it easy to use in small rooms like bathroom and kitchen.
- The TOPRO Troja Neuro Laser model has in addition a green laser light that helps with "freezing" episodes which can occur with Parkinson's disease.
- Easy to negotiate thresholds and kerbs etc. with the edge guard and tilt function.
- Accessories for a variety of uses are available, e.g. one-handed brake and adjustable back support.

## Easy to fold, requiring little space when stored

- Pull the cord on the seat and the rollator folds together horizontally.
- Push the handlebars down into the sidebars.
- Unique memory function sets the handlebars back to the appropriate height.
- Stays securely on its wheels when folded.
- Takes little space and is very practical to transport.
- Excellent for users who travel by car, train, bus or airplane.

## Practical and lightweight

- Plastic coated aluminium tube and plastic couplings.
- Fabric consists of plastic and polyester.
- A total of 12 ball bearings in the wheel and forks provide excellent driving comfort.
- Can be steamed, hosed and washed, provided that the laser light unit and the switch box are removed.

## TOPRO TROJA NEURO LASER

### Laser light with a wireless switch

The TOPRO Troja Neuro Laser model comes with a laser light that can help a person who suffers from "freezing" episodes to move forwards. The laser light can easily be operated from the handle and the transfer is wireless to the laser light unit.

**The laser light unit** receives wireless signals from the switch on the handle and produces a green laser light which shows as a line between the rear wheels of the rollator. After 15 seconds the light is automatically turned off. If desired this can be adjusted. The green laser light is known to be six times more visible than red.

## TOPRO TROJA NEURO

	<b>M</b> medium	<b>S</b> small
Colour	Dark Grey	Silver
Recommended user height	150–200 cm	135–170 cm
